

Hardware Business Management System

Purpose of This Document

Project vision, business problem, confirmed scope, roles, system scope, and first build boundaries. This standalone file is written for handoff to a Cloud AI, software developer, designer, database planner, or project reviewer.

How to Use This Document

- Use Confirmed requirements as agreed scope for planning and implementation.
- Use Proposed requirements as recommended starting points that can still be adjusted.
- Use Pending Decision items as questions for the business owner before coding or final schema design.
- Do not treat unresolved accounting, profit, allocation, stock costing, tax, or debt rules as final until the owner confirms them.

Status Label Convention

Confirmed means the item is part of the agreed scope. Proposed means it is a recommended implementation detail that can still change. Pending Decision means the business owner must decide before a developer or Cloud AI treats it as final.

Status	Meaning	Developer Handling
Confirmed	Part of the agreed project scope.	Implement unless later changed by the owner.
Proposed	Recommended approach or useful feature.	Validate during design and planning.
Pending Decision	Business rule or accounting detail not fully decided.	Ask the owner or make configurable. Do not hard code.

Document 01 Project Overview and Vision

This document defines the business vision and overall scope for a hardware business management system. The system will help the owner manage multiple hardware shops through a mobile application and a web administration platform. The core purpose is to make daily operations, stock movement, sales, expenses, capital, debts, profit tracking, reporting, and auditability easier to control.

Project Vision

The vision is to build a reliable business management platform that can work in a shop environment even when internet access is unstable. Shop users should be able to record transactions quickly from the mobile application. The owner or central administrator should be able to supervise shops, review reports, monitor stock, and inspect financial activity through the web administration interface.

Business Problem

- Stock, sales, purchases, expenses, capital, and debts can become difficult to track when multiple shops are involved.
- Manual records make it hard to know daily profit, business performance, debt exposure, and available capital.
- Internet interruptions can block cloud-only systems from being useful at the exact time a shop needs to record a transaction.
- The business needs audit trails so changes, deletions, approvals, and corrections can be traced to a specific user and time.

Confirmed Scope Summary

Area	Requirement	Status
Platforms	Mobile application plus web administration system.	Confirmed
Roles	Super Admin and Shop Admin must be supported.	Confirmed
Product records	Products, categories, buying price, selling price, stock quantity, and related details must be managed.	Confirmed
Purchases	Purchases must increase stock and support supplier and cost tracking.	Confirmed
Sales	Sales must reduce stock and support profit calculation.	Confirmed
Expenses	Business expenses must be recorded and reflected in reports.	Confirmed
Capital	Business capital must be tracked.	Confirmed
Debts	Customer or business debts must be tracked.	Confirmed
Daily operation	Daily opening and daily closing must be supported.	Confirmed
Offline storage	Mobile app must use SQLite locally and synchronize with MySQL when online.	Confirmed
Reports	Reports are required for sales, stock, profit, expenses, capital, debts, and daily closing.	Confirmed
Security	Role-based access, login security, and audit trail are required.	Confirmed

Out of Scope for First Build

Item	Status	Notes
E-commerce customer shopping portal	Proposed	Can be considered later if the business wants online customer ordering.
Full payroll management	Proposed	Basic staff/user records may exist, but payroll is not part of the confirmed first scope.
Tax filing automation	Pending Decision	Tax and VAT logic must be defined before automation.
Bank integration	Proposed	Manual capital and payment records are enough for the first build unless integration is requested.
